

MAHFUJ ISLAM

Full Stack Developer

Bangladesh • +880 9658970501 • mirlabs11@gmail.com
github.com/mirlabss

PROFILE

Full stack developer who takes an idea from nothing to a polished, production-ready product — design, frontend, backend, payments, and admin tooling, all handled end to end. Builds fast, builds clean, and delivers work that looks and performs like it belongs to a real business, not a demo. Fluent across the JavaScript ecosystem (React, Node.js, Next.js) with a grounding in C and C++ for real engineering depth.

Full-Cycle Builder — design, dev, and deploy, start to finish • **Production-Grade** — payments, admin panels, automation, not just UI

TECHNICAL SKILLS

Languages: JavaScript, TypeScript-ready, C, C++, HTML5, CSS3

Frontend: React, Responsive / mobile-first design, UI/UX fundamentals

Backend: Node.js, Next.js, REST APIs, form/email integrations (Web3Forms, EmailJS)

Tools: Git, GitHub, Vercel, browser devtools, image/asset optimization

PROJECTS

Fruitopia — E-Commerce Platform

React · Node.js · MongoDB · Express · Stripe

- Built a full e-commerce platform designed to work for any online retail store, from catalog to checkout.
- Implemented an automated payment system with courier integration for end-to-end order fulfillment.
- Automated invoice generation and delivery to customers, plus real-time admin notifications on every new order.

Creamy — Animated Ice Cream Shop Website

JavaScript · CSS · Node.js · Express

- Designed and built an animated storefront focused on smooth, playful motion design across the interface.
- Built a custom admin panel so products and orders can be managed entirely without touching code.

Trading Signals App

React · Node.js · JavaScript

- Built a Dexscreener-style market tracking application for real-time price and market data.
- Implemented automatic buy/sell signal generation to support user trading decisions.

MIR Labs — Portfolio Website

HTML5 · CSS3 · JavaScript

- Designed and built a fully responsive personal portfolio, tuned for mobile, tablet, and desktop.
- Implemented a contact form that submits silently in the background via a form API, with no dependency on a local mail client.

EDUCATION

B.Sc. in Computer Science & Engineering (CSE) — In Progress

Practical skills built in parallel through independent, hands-on project work — designing, building, and shipping complete full stack applications outside coursework.
